

# Powered Industrial Truck Operator Assessment

Name: \_\_\_\_\_ Date: \_\_\_\_\_

1. When is it okay to travel forward on your powered industrial truck?
  - A. When the load is taller than the mast.
  - B. After you've given a few short blasts of the horn
  - C. When you can see the aisle clearly without your load obstructing your view.
  - D. All of the above.
2. When a powered industrial truck is left unattended, which of the following actions should be taken prior to leaving the powered industrial truck?
  - A. Neutralize controls
  - B. Set parking brake
  - C. Fully lower load
  - D. All of the above
3. A load should be carried:
  - A. All the way back and level.
  - B. All the way back and tilted slightly forward.
  - C. All the way back and tilted slightly back.
4. Powered industrial trucks have very poor traction on wet or slippery surfaces.
  - A. True
  - B. False

5. You should never permit anyone to stand or pass under elevated forks.
  - A. True
  - B. False
6. You should never leave your truck when the engine is running.
  - A. True
  - B. False
7. You are responsible for your actions at all times while operating a powered industrial truck.
  - A. True
  - B. False
8. A powered industrial lift truck is considered unattended when the operator is how far away?
  - A. 15 feet
  - B. 25 feet or any distance if the truck is out of sight
  - C. 100 feet
  - D. any distance
9. You should do this at intersections and blind spots:
  - A. Drive on since you have the right of way.
  - B. Slow down, look, sound horn, and then drive through.
  - C. Slow down and sound horn.
10. What is considered a safe following distance for powered industrial trucks?
  - A. One powered industrial truck length.
  - B. Two powered industrial truck lengths.
  - C. Three powered industrial truck lengths.

11. You should never enter a trailer that appears unsafe, even if the driver says they used a powered industrial truck to load it.
  - A. True
  - B. False
  
12. If you are out of sight of your powered industrial truck, even if you are only ten feet away, it is considered unattended.
  - A. True
  - B. False
  
13. You should never carry more than two pallets at once with a powered industrial truck.
  - A. True
  - B. False
  
14. Even if your vision is partially obstructed by your load you can still travel forward.
  - A. True
  - B. False
  
15. Fire aisles, access to stairways and fire equipment should never be blocked by a powered industrial truck.
  - A. True
  - B. False
  
16. You do not have to wear safety glasses while operating a powered industrial truck since they tend to obstruct peripheral vision.
  - A. True
  - B. False

17. Stacking and unstacking must be done carefully because the higher you lift a load, the more unstable the powered industrial truck becomes.
- A. True
  - B. False
18. A driver need not worry about the rear end swinging wide when the powered industrial truck is turning a corner.
- A. True
  - B. False
19. The load should be carried against the backrest if possible.
- A. True
  - B. False
20. Except when maneuvering at a very low speed, the steering wheel should be turned at a moderate, even rate.
- A. True
  - B. False
21. One hand should be kept on the steering wheel at all times while the truck is in forward or reverse motion.
- A. True
  - B. False
22. No one should be raised on the forks without the personnel cage.
- A. True
  - B. False

23. When using the safety platform for lifting personnel, it is essential that it be securely fastened to the lifting carriage or forks.
- A. True
  - B. False
24. If the powered industrial truck you are operating starts to tip over, you should stay with the truck.
- A. True
  - B. False
25. Before entering a trailer with a powered industrial truck, the operator should check:
- A. To ensure that the trailer is chocked.
  - B. The dock boards and bridge plates.
  - C. The flooring in the trailer for weakness or holes.
  - D. All of the above.
26. Powered industrial trucks have the right of way over emergency vehicles.
- A. True
  - B. False
27. The rear end of a powered industrial truck will swing much wider than an automobile rear end would making the same maneuver.
- A. True
  - B. False
28. What are three examples of the wrong way to operate a powered industrial truck?

29. Anytime you leave the powered industrial truck you must fully lower the forks, neutralize the controls and set the parking brake.
- A. True
  - B. False
30. A powered industrial truck turns in exactly the same manner as an automobile.
- A. True
  - B. False
31. Which direction should you travel when going down a ramp with a load?
- A. Forward
  - B. Reverse
  - C. A and B
32. It is not necessary to wear gloves while refueling a LP gas cylinder.
- A. True
  - B. False
33. There is no standard procedure for checking a powered industrial truck to be sure it is in good operating condition.
- A. True
  - B. False
34. If you have to cross an uneven surface such as railroad tracks, it is best to do it at an angle.
- A. True
  - B. False

35. The further forward on the forks you carry the load, the more weight you can carry.
- A. True
  - B. False
36. When descending or ascending grades, loaded trucks should be driven with the loads downgrade.
- A. True
  - B. False
37. How can you tell what the rated weight capacity is on a powered industrial truck?
- A. Ask the previous operator.
  - B. Since we do not have anything that is heavy, it doesn't matter.
  - C. Check the lift data plate.
  - D. A and B.
38. The reason a powered industrial truck turns so sharply is that it is front steering.
- A. True
  - B. False
39. It is okay to refuel the LP tank while it is still on the powered industrial truck.
- A. True
  - B. False
40. Pedestrians have the right of way inside the solid yellow lines.
- A. True
  - B. False
